Northwestern University, Evanston, USA
- Developed reconstruction algorithms for large-scale 3D x-ray tomographic and ptychographic imaging.
- Conducted x-ray microtomography acquisition at the Advanced Photon Source, beamline 32-ID.
- Innovated the use of TensorFlow and Autograd as an automatic differentiation engine in beyond-depth-of-focus object reconstruction.
- Used computing clusters at the Argonne Leadership Computing Facility for high-performance computation.
- Involved in the development of AuTomo, an automated data processing protocol.

2014 — **Student researcher**
Singapore Institute of Manufacturing Technology, Singapore
- Experimentally studied the pore size dependence of anodic aluminum oxide on voltage and electrolyte temperature.
- Developed a tool for unsupervised data analysis.
